Cleeve Technology International is pleased to announce that additional Interconnect manufacturing has been added to the Cleeve group of companies. Cleeve now has in-depth high performance harness manufacturing companies in Canada, the UK and Australia where we manufacture high performance electrical harness assemblies and systems for the Military, communications and Aerospace industries. Cleeve is able to offer its customers substantial "in house" capabilities and services to further compliment our overall system strength, which we now support "locally" from a number of locations around the world. Cleeve's strength derives from a highly focused engineering approach to solving electrical interconnect problems. From the supply of components such as wire, cable, connectors, and accessories through to completely wired and tested systems to meet specific project requirements. From standard mil-spec qualified parts and build to print assemblies through to tested and qualified alternatives to sophisticated systems. Assigned with NSCM cage code 3AN64.

Cleeve Technology International is a high-tech, innovative company that has developed a substantial profile in the electrical interconnect sector of the aerospace, military and marine industries worldwide.

Cleeve’s business continued to expand both domestically and internationally as the company continued to focus on providing solutions to customers’ needs in the area of electrical interconnect in harsh environments. Since the company takes a “systems approach” to design, development, qualification, supply and follow-up on product support, it allows it to ensure compatibility of the many products used in a high performance electrical system, panel or enclosure, resulting in a very high customer satisfaction.

Cleeve has invested in material management software and systems that allows them to service customers with detailed reports related to performance and quality. Coupled with the company’s knowledge of the compatibility of products, Cleeve provides its customers with access to a unique market of electrical interconnect components and assemblies that would not normally be available.

Cleeve recognized the benefits of expanding its business in the United Kingdom, Europe and Australia. This visibility helped Cleeve capture one of the largest contracts for supplying electrical interconnect components to the British Military in support of the Bowman Communication System Program. Cleeve has secured exclusive supply agreements with a number of assembly shops around the world and continues to expand its customer base with blue chip OEM’s. The addition of “In Country harness manufacturing” further compliments that capability and commitment to our customers needs.

Cleeve has operations in Canada, the UK, Germany, Holland and Australia, all of which continue to grow and gain market share and all of which Cleeve will continue to invest in and expand. Cleeve has plans to expand into the US and other locations in the near future.

Cleeve has acquired, and continues to acquire, complementary companies that allow them to expand into new markets. These companies include capabilities in harness manufacturing, machined parts, metal fabrication, engineering services and technical representation, and as a result Cleeve continues to provide the highest quality of products with improved lead times over competitors, faster turn around and support times and thus securing a position as a leader in their field. The Cleeve Group of Companies are ISO and/or AS9100 Certified and comply with the rigid standards dictated by military and aerospace requirements. All the Cleeve companies support requirements demanded by ITAR and controlled goods and all are very familiar with trade restrictions, duty and other considerations when trading internationally.
